### EUROCONTROL ALC Update

Dear team,

On Monday, we will celebrate the 100,000<sup>th</sup> participant of the E-Learning module for UAS remote pilots. The development and hosting (on Learning Zone) of this module is one of the examples of ALC expanding its scope to **Aviation**. It is also a very good example of ALC supporting the implementation of **EU Regulation** according to which drone pilots need to take a training course and pass an examination.

It is the result of a **partnership** between the Luxembourg DAC (Direction de l'Aviation Civile) and the EUROCONTROL Aviation Learning Centre.

The launch of this E-learning module goes back to January 2021. The module stays very popular up till today. Within a timespan of a bit more than 3 years, we reached 100,000 participants. The take up has been and still is a big driver for our sky high numbers for e-learning participants.

The celebration will take place with representatives of the Luxembourg Ministry of Transport and DAC. Mr Marc Adam from the Luxembourgish railway company CFL will represent the participants.

A big thank you to Ashley, Gabby, Oleks, Nadine, Nicolas, Jonathan, Dragan and David for their direct contribution to this very successful achievement.

Best regards and a good weekend,

Rik.
